

Know The Score!

Building Energy Benchmarking Demonstration Project

Saving expenses matters – and with LPC’s business benchmarking program, you can drive your company’s utility costs down by improving your energy efficiency. We’ll help you add up your building’s energy score, giving you the information you need to find new opportunities to save money and energy.

What is Benchmarking?

Our building energy benchmarking process helps you track your annual energy use and get a 1-to-100 ENERGY STAR® score based on a typical building of your type: 50 is average while 75 or higher puts you among the top performers in the nation. That lets you know how well your facilities are doing so you can tune things up where needed.

Why Does It Matter?

The more you know, the more you can do! A typical company can lower its yearly energy costs by 2.4%, just by using what it learns to fine-tune its energy efficiency. The result is a building that’s more economical to operate, more attractive to prospective tenants, and more comfortable for your workforce.

How Does It Work?

Just enter your building’s basic information into the EPA’s ENERGY STAR Portfolio Manager®, such as its size, how many people work there, the number of computers in the building, and the monthly energy use from your utility bills. That data is then compared to similar facilities across the U.S. You’ll see how you measure up – and over time, how you improve!

How Do I Raise My Score?

Improving a building's performance can start with simple steps like keeping air vents clear or remembering to turn off the lights when you leave, or look into more comprehensive solutions. We offer a comprehensive Efficiency Works™ commercial building assessment and rebates for many common renovations and retrofits, so that you can get the savings you need.

Efficiency Works

How Do I Get Started?

Just contact Longmont Power & Communications Energy Strategy Specialist Debbie Seidman at 303-651-8599 or by emailing debbie.seidman@longmontcolorado.gov. LPC will begin this demonstration project in June 2020, working with a few select customers as initial participants. We will provide assistance, including a brief presentation, and will ask for feedback to help refine the program.

Together, we'll help it all add up for your business and a more energy-efficient community.
